Users' Guide

Product - Personal weighing machines, including baby scales; household scales

Industry - Machinery

Scope of the Report

Growing interest in personal weighing machines, including baby scales; household scales produced in the machinery industry are expected to drive the market.

The market study aims at estimating the market size and the growth potential of this market. Topics analyzed within the report include a detailed breakdown of the global markets for personal weighing machines, including baby scales; household scales by geography and historical trend. The scope of the report extends to sizing of the personal weighing machines, including baby scales; household scales market and global market trends with market data for 2023 as the base year, 2024 and 2025 as the estimate years and forecast for 2026 with projection of CAGR from 2026 to 2031.

Product shipments include the total value of all products produced and shipped by all producers. For selected products, this can represent value of receipts, value of production, or value of work done. Market data is provided in U.S. dollar value at global and regional levels, as well as local currencies for all countries.

Report Coverage

The report focuses a detailed calculation of original equipment manufacturers and the related system providers. The study forecasts the market value of the personal weighing machines, including baby scales; household scales market.

Published annually, this report provides a unique and accurate estimate on market sizing for this equipment/material using a proprietary economic model that integrates historical trends (horizontal analysis) and longitudinal analysis of incorporated industries (vertical analysis).

Regional summaries include North America, Europe, Asia-Pacific, Latin America, Africa, and Middle East. Percent shares are presented for each region as a share of the global market.

Product shipments values are also broken down by geographic areas in the countries in the report for regions, districts, provinces, states and cities.

This report does not list key players/companies in the market but focuses on a top-down and outlook view of the market despite the existing and entering of market companies.

Users' Guide

Benefits of the Report

This report is primarily aimed at business professionals in fields related to the market. These may include manufacturers and their suppliers, financiers and investors, researchers with backgrounds in the market, marketing and sales professionals, and others.

This report may also prove valuable to professional analysts, investors, public policy advisors and others who are seeking a better understanding and definition of how personal weighing machines, including baby scales; household scales fit into the broader global market.

The report will help the market leaders and new entrants in this market with information on the closest approximations of the revenue numbers for the overall market. This report will help stakeholders understand the competitive landscape and gain more insights to better position their businesses and to plan market strategies. The report also helps stakeholders understand the opportunities of the market.

Methodology

Product - Personal weighing machines, including baby scales; household scales

Industry: Machinery

Sector: Industrials

Methodology

The Global Manufacturing Forecast report series by Perry/Hope Partners features market sales of thousands of manufactured products in various industries such as transportation, hardware, electronics, electrical products, printing services and food products. The reports are published annually based on a unique methodology that uses robust data sources and detailed logarithms to estimate global markets for manufactured products. The main steps in the methodology are:

- Manufactured products definitions and historical data are primarily based on EuroStat's Prodcom database which is updated annually.
- Market sales for the European countries are used as a ratio to all other countries in the report by GDP and the percent of the total manufacturing sector as percent of the countries total GDP.
- Adjustments to estimates are both vertical (industry) analysis and horizontal (trend) analysis.
- Demographic breakdowns of regions, cities, states, districts and provinces are based on historical population and regional GDP data projected forward.

Methodology

Product - Personal weighing machines, including baby scales; household scales

Market Definition

The market for personal weighing machines encompasses a diverse range of devices designed for measuring body weight, including baby scales and household scales. These products cater to various consumer needs, from individual health monitoring to parental care. Personal weighing machines are typically categorized into digital and mechanical types, with digital scales gaining popularity due to their accuracy and user-friendly features. The market is driven by rising health consciousness among consumers, the increasing prevalence of obesity, and a growing emphasis on fitness and wellness. Additionally, technological advancements, such as smartphone connectivity and body composition analysis, are enhancing the functionality of these devices. Key players in the market include established brands and innovative startups, creating a competitive landscape focused on quality, design, and consumer engagement.

Market Segments

Market segments for personal weighing machines, including baby scales and household scales, can be categorized into various groups based on user needs and preferences.

1. Consumer Segment: This includes households looking for basic weighing solutions for personal health monitoring. Products in this segment focus on ease of use, affordability, and functionality.
2. Healthcare Segment: Medical facilities and professionals require precise, durable scales for patient monitoring. This segment often demands advanced features like BMI calculation and digital displays.
3. Fitness Segment: Fitness enthusiasts seek scales that track body composition metrics, including fat percentage and muscle mass. These products emphasize technology integration, often connecting with mobile apps.
4. Parenting Segment: Baby scales cater to new parents wanting to monitor their infants' growth, emphasizing safety and accuracy.

Each segment drives innovation and product differentiation in the personal weighing machine market.

Methodology

Product - Personal weighing machines, including baby scales; household scales

Market Strengths

The market for personal weighing machines, including baby scales and household scales, exhibits several strengths. First, the increasing global emphasis on health and wellness drives consumer demand for accurate and user-friendly weighing solutions. Enhanced features, such as digital displays, Bluetooth connectivity, and smart technology integration, attract tech-savvy consumers.

Moreover, the rise in obesity rates prompts individuals to monitor their weight regularly, further boosting sales. Baby scales cater to new parents' needs for precise infant monitoring, creating a niche market. The growing trend of home fitness and wellness routines also contributes to sustained demand.

Additionally, diverse designs and price points ensure accessibility for a broad audience, from budget-conscious consumers to premium buyers. Overall, the personal weighing machine market is positioned for continued growth.

Market Weaknesses

The market for personal weighing machines, including baby scales and household scales, faces several weaknesses. Firstly, technological advancements have led to the rise of smart scales, which may render traditional models obsolete, limiting demand for basic scales. Additionally, price sensitivity among consumers can lead to a preference for cheaper alternatives, often compromising quality. Furthermore, the competition from multifunctional health devices, such as fitness trackers, diverts consumer interest away from standalone weighing machines.

Consumer awareness regarding accurate weight measurement has increased, raising concerns about the reliability and precision of lower-end products. Lastly, the saturation of the market with numerous brands can result in confusion and decision fatigue, discouraging purchases. These factors collectively challenge the growth and sustainability of the personal weighing machine market.

Methodology

Product - Personal weighing machines, including baby scales; household scales

Market Threats

The market for personal weighing machines, including baby scales and household scales, faces several threats that could impact growth and profitability.

1. Competition: The emergence of innovative smart weighing devices poses a significant threat, as consumers increasingly prefer multifunctional gadgets that integrate with health apps.
2. Price Sensitivity: Economic fluctuations may lead consumers to opt for lower-cost alternatives, impacting premium brands.
3. Technological Advances: Rapid technological changes can render existing devices obsolete, necessitating continuous investment in R&D.
4. Health Trends: Shifting health trends may decrease demand for traditional scales, as people seek more holistic health monitoring solutions.
5. Regulatory Challenges: Stricter regulations regarding accuracy and safety standards could increase production costs for manufacturers.

Market Opportunities

The market for personal weighing machines, including baby scales and household scales, presents significant growth opportunities driven by rising health consciousness and the increasing emphasis on weight management. With a growing trend towards preventive healthcare, consumers are more inclined to monitor their weight regularly. Innovations such as smart scales integrated with mobile apps for tracking weight and body composition are gaining popularity, appealing to tech-savvy users. Additionally, the increasing number of fitness enthusiasts and the aging population seeking reliable health tools further bolster demand. Baby scales are particularly sought after by new parents, emphasizing the need for accurate infant weight monitoring. E-commerce growth also expands market reach, allowing manufacturers to tap into diverse consumer segments and geographic regions, enhancing overall market potential.

Overview

PRODCOM statistics aim at providing a full picture at EU level of developments in industrial production for a given product or for an industry in a comparable manner across countries. This aim became more important together with the establishment of the single market in 1992, and with rapid changes occurring in Europe the statistical system had to adapt to these changes.

The acronym PRODCOM comes from the French “PRODUCTION COMMUNAUTAIRE” (Community Production). The PRODCOM list is updated each year by the PRODCOM Expert Group. The headings of the PRODCOM list are linked to those from the Combined Nomenclature (CN) used to compile International Trade in Goods statistics, which thus enables direct comparisons between industrial production statistics and trade statistics (see below). PRODCOM headings are coded using an eight-digit numerical code, the first six digits of which are identical to those of the Statistical Classification of Products by Activity (CPA) code. The PRODCOM list is therefore also fully consistent with the CPA, while further detailing the CPA product categories.

PRODCOM statistics are broken down to a detail level of almost 3900 products available in the PRODCOM list. The main indicators of the production sold during the calendar year are collected and published both in monetary (EUR) and physical (kg, m2, number of items, etc.) terms.

Eurostat releases in its database PRODCOM statistics for the EU as a whole as well as by Member State. The EU total excludes currently three EU Member States which are exempt from transmitting industrial production data given their small share in the EU total; these are Cyprus, Malta and Luxembourg.

How are PRODCOM statistics measured?

As mentioned above, PRODCOM statistics are based upon data on manufacturing of goods produced by the enterprises on the national territory. These enterprises carry out one or more activities at one or more locations and may comprise one or more legal units. When an enterprise is active in more than one economic activity, then the value added and turnover that it generates, the persons it employs, and the values of all other statistical variables will be classified under the enterprise’s principal activity. The principal activity is normally the one that generates the largest amount of value added. For PRODCOM statistics, the survey population consists of enterprises whose principal activity or one of its secondary activities was manufacturing of goods during the reference period.

PRODCOM statistics are compiled from the enterprises that cover at least 90 % of the national production per NACE class and employ at least 20 people (different thresholds may nonetheless be adopted by countries in exceptional cases). The territory covered in each country refers to the specifications of the Nomenclature of Countries and Territories for the External Trade Statistics of the Community and Statistics of Trade between Member States.

Indicator definitions for key PRODCOM statistics

PRODCOM statistics consist of the following set of indicators:

the physical volume of production sold during the survey period,
the value of production sold during the survey period,

the physical volume of actual production during the survey period, including any production which is incorporated into the manufacture of other products from the same undertaking.

The national statistical institutes transmit this set of indicators to Eurostat on an annual basis, six months after the end of the reference year. Data are available in both NACE Rev. 1.1 and NACE Rev. 2 classifications until 2008 reference year and from reference year 2009 onwards only in NACE Rev.2.

Appendix

Which parts of the economy does PRODCOM cover?

The PRODCOM statistics cover the industrial production (with the exception of military products and some energy products) carried out by enterprises classified within the Sections B to C of NACE Rev. 2, which include:

- Section B - Mining and quarrying
 - Division 07 - Mining of metal ores
 - Division 08 - Other mining and quarrying
 - Division 09 - Mining support service activities
- Section C - Manufacture
 - Division 10 - Manufacture of food products
 - Division 11 - Manufacture of beverages
 - Division 12 - Manufacture of tobacco products
 - Division 13 - Manufacture of textiles
 - Division 14 - Manufacture of wearing apparel
 - Division 15 - Manufacture of leather and related products
 - Division 16 - Manufacture of wood and of products of wood and cork, except furniture
 - Division 17 - Manufacture of paper and paper products
 - Division 18 - Printing and reproduction of recorded media
 - Division 19 - Manufacture of coke and refined petroleum products
 - Division 20 - Manufacture of chemicals and chemical products
 - Division 21 - Manufacture of basic pharmaceutical products and pharmaceutical preparations
 - Division 22 - Manufacture of rubber and plastic products
 - Division 23 - Manufacture of other non-metallic mineral products
 - Division 24 - Manufacture of basic metals
 - Division 25 - Manufacture of fabricated metal products, except machinery and equipment
 - Division 26 - Manufacture of computer, electronic and optical products
 - Division 27 - Manufacture of electrical equipment
 - Division 28 - Manufacture of machinery and equipment n.e.c.
 - Division 29 - Manufacture of motor vehicles, trailers and semi-trailers
 - Division 30 - Manufacture of other transport equipment
 - Division 31 - Manufacture of furniture
 - Division 32 - Other manufacturing
 - Division 33 - Repair and installation of machinery and equipment

Legislation

PRODCOM statistics are compiled under the legal basis provided by Council Regulation (EEC) NO 3924/1991 of 19 December 1991 and by Commission Regulation (EC) No 0912/2004 of 29 April 2004 implementing the Council Regulation (EEC) No 3924/91 on the establishment of a Community survey of industrial production. Additionally, a Commission Regulation updating the PRODCOM classification is available annually since 2003.

Methodology

A summary of the methodology applied for PRODCOM statistics accompanies the data on Eurostat's website as a European Statistics Metadata System (ESMS) metadata file (prodcom_esms). The national European Statistics Metadata System (ESMS) metadata files, employed by countries for PRODCOM statistics are available under the ESMS metadata file (prodcom_esms).

Classifications

Appendix

As mentioned above, the enterprises which are surveyed for PRODCOM statistics are classified according to their activity and assigned to a particular NACE code. The revised NACE Rev. 2 classification was adopted at the end of 2006, and is applicable to the PRODCOM Statistics since 2008 reference year. These changes in the classifications allowed a broader and more detailed collection of information to be compiled on industry, and provided the possibility to better identify new products from new areas of economic activity (such as technology-producing sectors).

Existing PRODCOM statistics presented in terms of NACE Rev. 1.1 will be maintained in the database for those users wishing to analyse historical series.

Before industrial production data collection could start, it was necessary to draw up a common list of products to be covered. Drawing up the PRODCOM list was a unique opportunity for Eurostat, the National Statistical Institutes and the European Trade Associations to work together to produce a classification that would work on the micro, national and European levels. The two main objectives of this work were to enable measuring the industrial production and to allow linking production statistics to trade statistics. As PRODCOM statistics have to be comparable with trade statistics, which are based on the CN, there had to be a close relationship between the two nomenclatures. Furthermore, the basic building blocks for PRODCOM are NACE (Rev. 2, as from 2008) and the CPA. Therefore, the PRODCOM list had to be developed in close association with these nomenclatures.

To understand how the different nomenclatures fit together, and their links to world-wide nomenclatures, it is useful to consider the diagram below which gives an overview of the revised system of integrated statistical classifications. This diagram shows the clear links between the PRODCOM list and the CN, which then links up to the HS at a world-wide level.

Diagram links: PRODCOM list, CN and HS

Policy context

Industrial production statistics collected within PRODCOM are used as one of the data sources in a number of policy areas covered mainly by the work of the Directorate-General for Internal Market, Industry, Entrepreneurship and SMEs (GROW). The European Commission's enterprise policies aim to create a favourable environment for business to thrive within the EU, creating higher productivity, economic growth, jobs and wealth. Many of the policies that have been introduced in recent years have been aimed at reducing administrative burdens, stimulating innovation, encouraging sustainable production, and ensuring the smooth functioning of the EU's internal market.

At the European Council meeting of 26 March 2010, EU leaders set out their plan for Europe 2020, a strategy to enhance the competitiveness of the EU and to create more growth and jobs. The latest revision of the integrated economic and employment guidelines (revised as part of the Europe 2020 strategy for smart, sustainable and inclusive growth) includes a guideline to improve the business and consumer environment and modernise Europe's industrial base. Additional information about the Europe 2020 strategy can be found on the Europe 2020 website.

In October 2010, the European Commission presented a Communication on "An industrial policy for the globalisation era", establishing a strategic agenda and proposing broad cross-sectoral measures, as well as tailor-made actions for specific industries, mainly targeting so-called "green innovation" performance of various sectors. Prodcum statistics represent an important data input in order to take informed political decisions in these areas.

The central principles governing the internal market for services guarantee EU enterprises the freedom to establish themselves in other Member States, and the freedom to provide services on the territory of another EU Member State other than the one in which they are established. These central principles governing the internal market were set out in the EC Treaty. The objective of the Directive 0123/2006 of 12 December 2006 is to eliminate obstacles to trade in services, thus allowing the development of cross-border operations. It is intended to improve competitiveness, not just of service enterprises but also of European industry as a whole. In December 2006, the Directive was adopted by the European Parliament and the Council with transposition by the Member States required by the end of 2009. A comprehensive and structured listing of the legislative acts in force relating to industrial policy is available on Eurlex's website.
